

Make the factory automated and compact

Visualize the entire production site and utilize the space

➤ Optimize the production site with the ever-evolving simulation technology

- Proposals of optimal solutions with the Mitsubishi Electric's digital technology, systems, and field knowledge

Automation with AMRs required, but difficult to determine the cost-effectiveness

➤ Calculate the cost-effectiveness by using a simulator

Reference Exhibition

- Calculate the optimal AMR path and the number of AMRs in simulation to determine the cost-effectiveness.

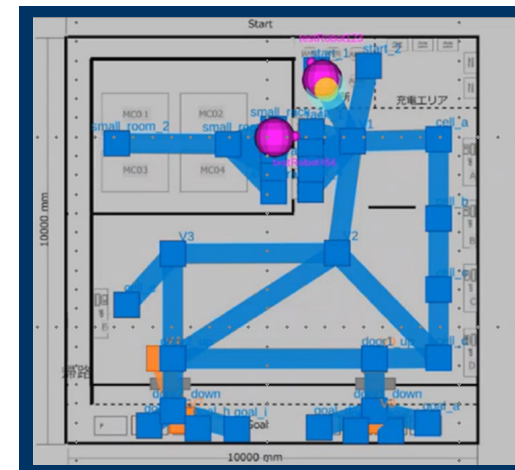

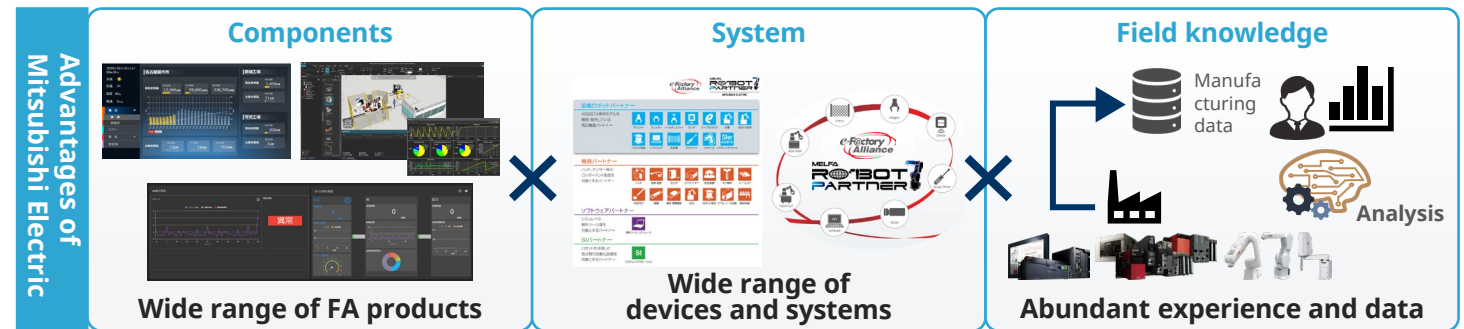

No in-house system integrator who can implement automation

➤ Standard cell available to introduce the system

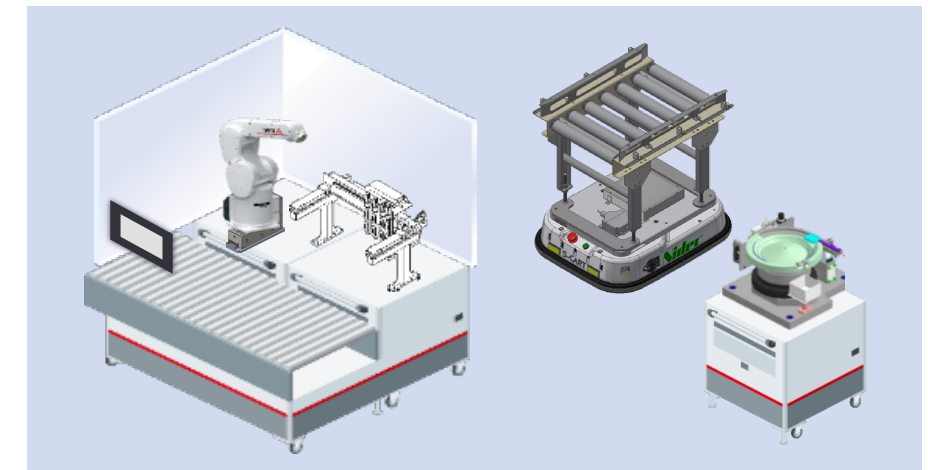

- Standard cells for various applications are available.

Customer issues

Flexible manufacturing line , complete automation of the manufacturing site , utilization of production data

AMR introduction simulation

Block Connect Cell
