

# **One stop for the best solution!**

OT security services for manufacturers

## Features

# From identification of security issues to planning of countermeasures, One-stop service to operation

Understand the organization of OT systems such as networks and the situation in the field, and offering assessment, consulting, countermeasure System Integration implementation, operation, and improvement services all in one stop. Maintain availability and reduce the risk of cyber attacks.

### Leveraging our expertise as a comprehensive electrical equipment manufacturer to respond to increasingly diverse and sophisticated cyber attacks

Offer wide range of services flexibly, from the introduction of security measures to 24/7, 365-day a year monitoring and operation services. Helps reduce security risks across OT systems.

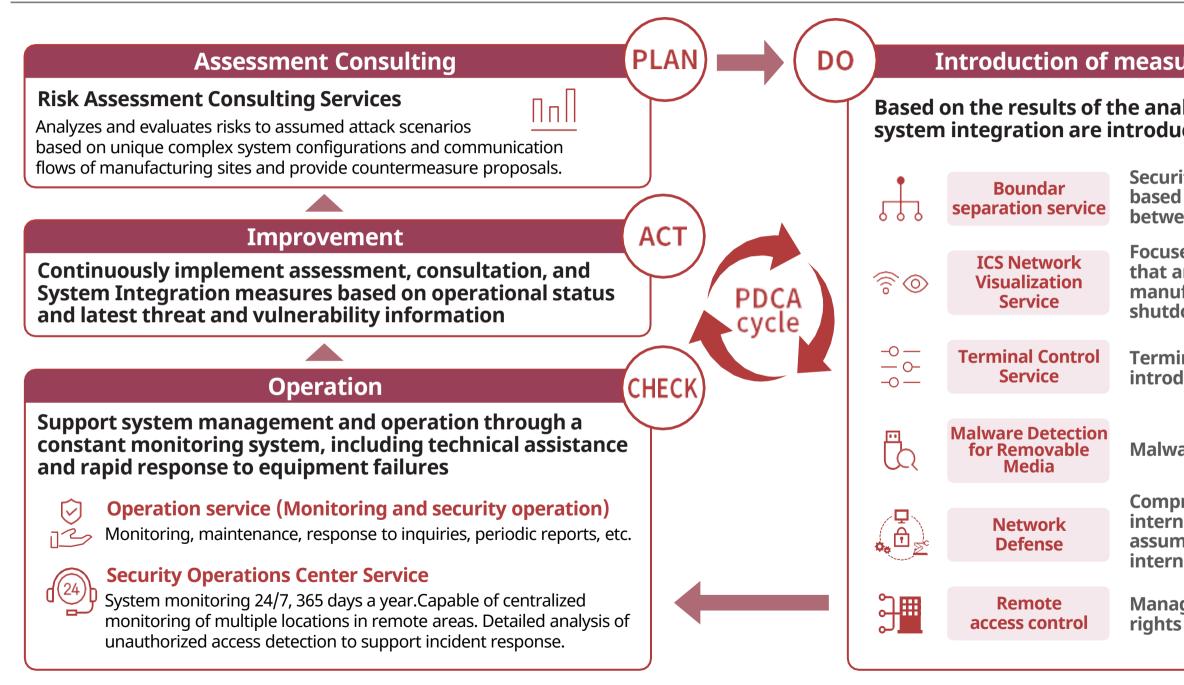

#### **Automating the World**

OT security services for manufacturers

#### Introduction of measures of system integration

#### Based on the results of the analysis, the optimal measures for system integration are introduced at the manufacturing site.

Security switch products such as firewalls based on the impact and relationship between field systems

Focuses on suspicious communications that are truly needed on on-site manufacturing and displays detection and shutdown logs on the dashboard

Terminal authentication system and introduction of Network filtering

Malware detection system

**Comprehensive measures including** internal IP networks for the entire system, assuming malware infection and attacks by internal intruders

Manage external access and control access

#### **Automating the World**
