

## Operability solutions

### Slow transmission speed hinders control

#### ➤ Reduced data usage, maintaining natural video

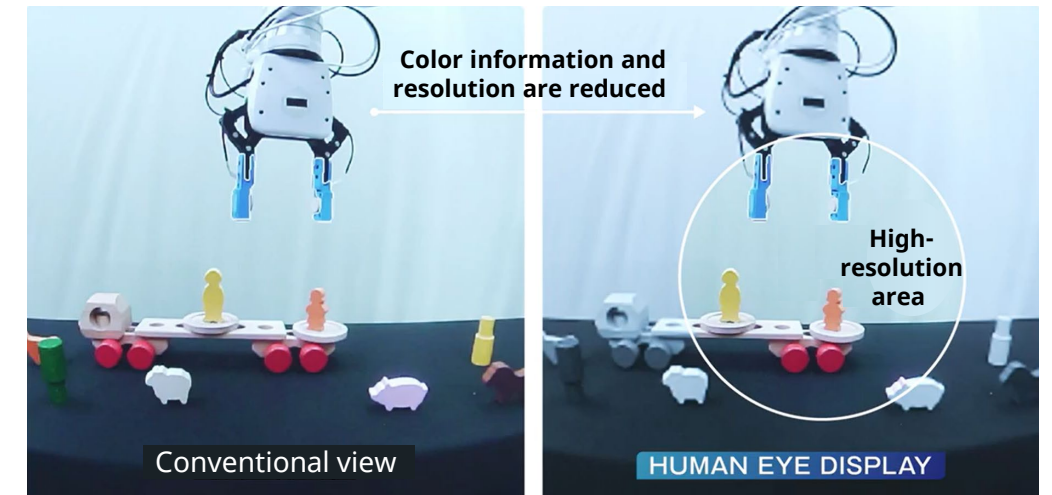

- We reduce data usage by proactively minimizing extraneous information (out-of-sight color data and resolution) based on human visual characteristics.
- Remote control enables swift on-site issue resolution.

### It's unclear when the hand grasps

#### ➤ Displaying force touch feedback in colors

- Force touch feedback is visually represented in color on the screen using Augmented Reality (AR).
- When gripping an object, colors on the gripper indicate the strength of force through shading.

## Feature 1) Data reduction technology

## Features 2) Force feedback with color cues
