

for a greener tomorrow

# If there is a problem, the solution should be perfect.

“ Unlike other companies, Mitsubishi Electric were able to adapt their system to fit the existing project design. This was the first and most important factor in choosing them. ”

**Hiromi Shoda**, Marmaray Project Manager, Taisei Corporation.

## Global Partner. Local Friend.

**Let me tell you my story:** Taisei Corporation had provided prestige, large-scale infrastructure projects around the world for more than 145 years. As such, we knew to take care selecting a partner for the Marmaray subway project in Turkey – the deepest underwater tunnel in the world, connecting Europe with Asia.

Mitsubishi Electric stood out from other companies not only because their system could be adapted to fit the existing project designs without the need for any reworking but also because of the expertise and enthusiasm of their staff. The result has been the development of a highly advanced SIMS (Station Information Management System) control system that automates the management of the subway's power distribution and tunnel ventilation systems, acting as Marmaray's heart and brain. We are looking forward to working with them again on other projects.
