

It sped the process up tremendously

“ With the new system, we can look at the report and we can go right to the problem areas. It allows us to make improvements right away. ”

Tony Ingram, Senior Staff Engineer, FCC (Adams), LLC.

Improved visualization and reporting with Mitsubishi Electric Industrial PC solutions

Let me tell you my story: FCC (Adams) is a clutch manufacturer. We provide high-quality parts to our automotive customers. With our focus on excellence, we wanted our tracking system to respond quickly to find any manufacturing faults. Mitsubishi Electric was able to take our ideas and reporting system, and then customized a new data collection system. The comprehensive production reports allow us to easily stay on top of things. Thank you, Mitsubishi Electric.
